

Refrigeration Compressor Oil

Refrigeration Compressor oils are high performance naphthenic mineral oils with an advanced additive system primarily intended for use in refrigeration compressors

Feature & Benefits

- ❖ Excellent low temperature flow and evaporator heat transfer for optimum system efficiency
- ❖ Long service life resulting in less downtime and lower maintenance costs
- ❖ Suitability for the lubrication of both cylinders and bearings reduces oil inventories

Applications

- ❖ Compatible with all refrigerants except sulphur dioxide ? not recommended for use with HFC refrigerants
- ❖ Large industrial reciprocating and rotary refrigeration compressors
- ❖ Industrial applications such as food freezing and cold storage plants
- ❖ Marine refrigeration applications
- ❖ Primary use with ammonia refrigerant, also with selected halocarbons
