

NeuroScan™ (WireFree Digital Biothesiometer)

World's First Android and PC enabled Software Application For Biothesiometer

NeuroScan™ is a non-invasive tools to detect neuropathy loss of sensation in terms of vibration. It is an electronic bio-medical device mainly used for wide range of research, laboratory to identifies the diabetic neuropathy. NeuroScan™ vibration strengthen operates tuning fork gradually increase the amplitude till the patient sense the vibration.

Our NeuroScan™ can be used to determine the vibration threshold of human subject over plantar, penile and hands too, yes our biothesiometry method is also used to quantify Erectile Dysfunction [ED]. Our NeuroScan™ hardawre system can be work with the PC software system as well as specially designed Android application. We proudly announce we are the first company who are introduced the Android compatibility in diabetic domain around the globe. Our software comes out with more added values advantages that brings to store more patient records, Keep visualise to compare the patient regular visits, Our best software infrastructure has to complete PDF Report to exports, E-mail report facility, simple printing reports & DICOM compatible report also maintain the patient history for statistical view reports patient data, highly secured protected software with light weight components for low memory management in PC/Android device.

Features :

- * Digital 0 to 50 Volts indicator.
- * Electronic tuning fork.
- * Fully solid state design
- * Software compatibility for PC & Android.
- * USB & WireFree connectivity option.
- * Test control key to cross check patient perception
- * Multiple kinds of patient report like A4, PDF, Image
- * E-mail & simple printing report facility.
- * DICOM compatible report generation.
- * Whatsapp, ShareIt, WiFi, Bluetooth and etc.,

Report Sharing facility.
